a
AVID dataset
32,040 paired RGB--IR frames
115 short surveillance videos
35,952 bird / drone instances
68.1% of targets are 8--16 px
b
Controlled perturbations
7 corruption families x 5 severities
weak-alignment stress tests
c
Measured data properties
object scale and class balance
RGB--IR shift relative to target size
d
Data-intrinsic readouts
class-overlap error bounds
fusion-gap and corruption penalties
alignment burden curve
mutual-information sensitivity
Dataset release → controlled changes → scale-aware, model-free diagnostics
